

IST

Calling all graduate Software Developers

Integration, Service and Technologies

Be part of a dynamic company, with a highly valued development team, and a defined career path all ready for you to step into. IST's product development is based in WA and specializes in developing solutions for the efficient delivery of voice, data and video self services to the contact center market.

Our team works with the latest in tools, protocols and software standards, and has the ultimate satisfaction of seeing their work actually deployed in the field. Their reputation is growing rapidly with customers and world leading vendors alike.

The flag ship product, interactive Service Delivery (iSD) framework, is deployed in many large scale contact centers in the Middle East, efficiently processing millions of automated self services calls every day. This framework allows software programmer to create and integrate complicated voice applications that provide sophisticated self services. The product integrates with specialized speech vendors ASR (automatic speech recognition) and TTS (text to speech) technology.

We are seeking expressions of interest from software graduates who are keen to develop their careers working on ground breaking exciting software projects.

Send your resume to the email address below or contact us for further information.
